Abstract (en)

[origin: EP0298836A1] The subject of the present invention is a packaging case (30) of small volume comprising loops (34) integral with a face (31) and regularly distributed, and eyelets (33) on the opposite face (32). These loops are linked to one another (60, 61), and the last loop (70) is locked by a locking pin (74). The invention also proposes the method making it possible to coil up the isothermic garment in this case. Advantage: directly usable garment with elimination of the endothermic effect upon extraction from the case. Application: air, land and sea equipment, rescue and survival. <IMAGE>
