Abstract (en)

[origin: EP0299271A2] The invention relates to a container-filling device for presses for draining solids and for transport presses, which is characterised in that a double-flange part is fastened to the outlet side of the press, at the outlet of which double-flange part a tapered fitting part is flanged on, which is connected by means of a quick-fitting pipe coupling to an intermediate part situated in the bottom region of a container.
