Abstract (en)
[origin: EP0299387A1] The tool for tensioning and severing a strap (53) comprises a traction element (11, 15), a cutting element (45, 59), a driving element (5) and a switching mechanism which actuates the cutting element when a threshold value of the tensile force acting on the strap is exceeded. The switching mechanism includes an adjustable rocker (39) whose position which determines the threshold force can be adjusted.
