Abstract (en)
A rotary brush (10) with removable brush elements (14) is provided. The brush elements (14) are disposed on a hub (11) in a radial display. The brush elements include a resiliently flexible element (21) which permits the brush to deflect at a greater angle (A) from a rest position (A') than the angle (B) of deflection of the bristles (16) of the brush (15) from a normal position (B') when the hub (11) is rotated with the bristles (16) in contact with the workpiece.
