Abstract (en)
[origin: EP0300143A2] This bracket with jaws (1) has a housing (2), extending in its longitudinal direction and accommodating a release spring (13), and a sole holder (7) which is arranged on a bolt (6) extending essentially perpendicular to the upper side of the ski. The bolt (6) is mounted with its lower end in a bearing body (3). <??>In order to make automatic setting of the sole holder (7) possible even when the thickness of the boot sole varies within prescribed tolerance limits, provision is made for the sole holder (7) to be guided displaceably on the bolt (6) and to be subjected to the effect of a spring element, e.g. a helical spring (8), which presses it against the upper side of the boot sole. <IMAGE>
