Abstract (en)
[origin: EP0300148A1] At least one receiving point is provided in the baseplate for an attachment screw. The wall of the receiving point has shoulders for fastening the inserted attachment screw in its non-mounted state, which shoulders are arranged offset relative to each other both along the circumference of the receiving point, constructed as a borehole, and in the vertical direction. The receiving point (3) with the shoulders (4) for the attachment screw (10) is provided in the interior of an insert (5). The insert (5), in turn, is arranged in a borehole (8) in the baseplate (2). The insert (5) can optionally be fitted with a flange (7) which then rests against a corresponding step (9) in the borehole (8) in the baseplate (2). <IMAGE>
