Abstract (en)
[origin: EP0300188A2] The transport equipment suspends a container (6) from an aircraft, particularly a helicopter. A supporting stirrup (1) is suspended from the latter, with a drive mechanism (10) tilting the container (6) on a horizontal axis (9). The container is detachably secured by a holder (18-20) tilted by the mechanism, which is mounted on the stirrup. The holder can have a part supporting the container bottom and another extending halfway round it, with detachable locking devices.
