Abstract (en)
The barrier comprises a single-piece shell (1), particularly in concrete, of a general trough shape, intended to be accommodated completely in a trench (3) in the ground, there being provided in the said shell a retractable barrier formed from a series of spikes (8) fastened on a shaft (6) so as to have a rest position (8') below ground level and so as to be capable of projecting above the ground by means of an incorporated drive unit (9). The spikes have two active positions (8, 8') which are substantially symmetrical relative to the vertical plane containing the shaft (6). <IMAGE>

Abstract (fr)
Le barrage comporte une coquille (1) monobloc, notamment en béton, en forme générale d'auge, destinée à venir se loger complètement dans une fouille (3) du sol, aménagée dans ladite coquille, une barrière escamotable formée d'une série de pointes (8) fixées sur un arbre (6), de façon à posséder une position de repos (8') en dessous du niveau du sol, et à pouvoir faire saillie hors du sol au moyen d'une motorisation incorporée (9). Les pointes ont deux positions d'action (8, 8'') sensiblement symétriques par rapport au plan vertical contenant l'arbre (6).
