Abstract (en)
[origin: EP0300971A1] Arranged at one end of a shoulder strap (1) of the device is a basket or a pouch (2) for receiving the rear ends of the skis (4). Provided at the other end of the shoulder strap (1) is a holding loop (3) which can be placed around the skis (4) over the binding (5). The device, connected to the skis in this manner, allows convenient transport of the skis in the vertical position. The extremely simple device, consisting solely of soft parts, with the exception of connection elements such as rivets, can be stored and transported easily by rolling up the loop (3) and the shoulder strap (1) and storing them in the basket or the pouch (2). <IMAGE>
