Abstract (en)
[origin: WO8805271A1] A cross-country ski shoe has an upper (1) and a sole (20) secured around its circumference to the upper (1). The sole (20) of the cross-country ski shoe has at least one supporting face (40a) that cooperates with a ski binding. In the sole (20) is moulded a hooking element (3) made of wire bent several times that can be brought into engagement with the ski binding. The hooking element (3) is made of solid plastic moulded into a first (front) section (40) of the sole (20). The first section (40) with the hooking element (3) embedded therein is moulded into a second section (60) of the sole (20) made of a softer, more elastic plastic than the first section (40).
