Abstract (en)

[origin: EP0301326A2] The inner conductor terminal for antenna sockets is intended to overcome the disadvantage of known inner conductor terminals of this type in which the screw that is used to press a compression body against the inner conductor can be lost. The inner conductor terminal according to the invention therefore contains a nozzle (20), on the lower side in an extension of the screw opening (18), whose inwardly pointing edge (21) engages in a circumferential slot (22) of the screw (12). In addition, in order to prevent the screw falling out of the antenna socket, the free end of the screw has a coaxial depression (31) and the edge (32) is broadened to the exterior. <IMAGE>
