Abstract (en)

[origin: EP0301989A1] The present invention relates to an unwinding machine, wherein it is essentially formed by two reel-carrying towers (1) surmounted at their upper part by a bridge structure (2) for receiving a web store (3) and by two boxes (4) for connecting webs on stopping, which are each allocated to a reel-carrying tower (1) and mounted so as to move in translation transversely to the web over the bridge structure (2).
