Abstract (en)

[origin: WO8805832A1] A device for the surface treatment of strips with fluids, in particular for corroding rolled metal strips comprises a corrosion container (3) closed by a lid (4) and through which the strip (10) is pushed. A device is provided between the strip (10) and the lid (4) to guide the strip in its direction of movement when the strip is set up. The device can be composed of profiled parts that form a saw-tooth like portion. These profiled parts can be shaped as guiding girders (11) skewed in the direction of the strip inlet.

Abstract (fr)

Un dispositi de traitement de la surface de bandes avec des fluides, en particulier de corrosion de bandes métalliques laminées, comprend un récipient de corrosion (3) fermé par un couvercle (4), à travers lequel on fait passer la bande (10). Un dispositif agencé entre la bande (10) et le couvercle (4) guide la bande dans la direction d'avancement lorsque la bande est soulevée. Le dispositif peut être composé de parties profilées en dents de scie. Ces parties profilées peuvent prendre la forme de traverses de guidage (11) chanfreinées du côté d'admission de la bande.
