Abstract (en)

[origin: WO8805832A1] A device for the surface treatment of strips with fluids, in particular for corroding rolled metal strips comprises a corrosion container (3) closed by a lid (4) and through which the strip (10) is pushed. A device is provided between the strip (10) and the lid (4) to guide the strip in its direction of movement when the strip is set up. The device can be composed of profiled parts that form a saw-tooth like portion. These profiled parts can be shaped as guiding girders (11) skewed in the direction of the strip inlet.
