Abstract (en)
[origin: EP0302276A2] The antenna socket is intended to avoid the disadvantage of known antenna sockets in which a folded-up clip, which is used for securing the coaxial cables to be connected, can result in the connecting point being hidden from view. For this purpose, the antenna socket (10) has a clip (25) which can be pivoted about an axis (37) parallel to the longitudinal direction of the coaxial cables (17, 18). <IMAGE>
