Abstract (en)

[origin: EP0302350A2] For protection against radiated electromagnetic interference and electrostatic discharge, the lower part (1) of the housing consists of metal, the upper part (2) consists of a printed-circuit board, whose conductor pattern (6) is located on the inner surface, while the surface has a continuous metal coating (5) which makes contact with the housing lower part (1) in a manner such that it can be isolated. Further electronic assemblies (4), which are easily replaceable, are arranged in the housing and the printed-circuit board, forming the housing upper part (2), with the keyboard, is likewise easily replaceable, for example by a film keyboard. The invention is used for computer keyboards. <IMAGE>
