Abstract (en)
[origin: EP0302464A2] The invention relates to a device with which the layer thickness of the centrifuge filling can be determined by means of a sensor arm which makes contact with the filling surface of a screen-type centrifuge. In order to be in a position to be able to determine the respective quality of the surface of the centrifuge contents at any operating time of the screen-type centrifuge, it is proposed to arrange on the contact surface of the sensor arm a measuring sensor which detects physical quality values. <IMAGE>
