Abstract (en)

[origin: EP0302777A1] The terminal, used in connectors having a large number of contacts, comprises a body (10) having a forward tubular contact divided by longitudinal slits (24) into contact fingers and a rear barrel (18) intended to receive an electrical conductor and comprising an external protective tube. The barrel (18) is continuous and separated from the body by a circumferential enlarged region (22) imprisoned in a flared- out end portion of the external protective tube. <IMAGE>
