Abstract (en)
[origin: EP0302782A1] The invention relates to a heat-transfer fluid heating boiler body which is intended to receive at least one burner and is surrounded at least partially by a jacket (3) for circulation of said fluid, said jacket (3) comprising an outlet (5) for the heated fluid, which is arranged in the bottom part of the latter, and an inlet (4) for the cooled return fluid, which is arranged in the top part of said water jacket (3). The body of the boiler according to the invention is characterised in that the inlet (4, 4', 4'') of the return fluid is arranged in such a manner that the fluid is distributed into said jacket in a number of places at the same time. <IMAGE>
