Abstract (en)  
[origin: EP0303106A2] The bottom-most letter paper in a stack (12) is taken, for the purpose of separation, from a stacking magazine (10) by the edge of its folding part (26) by a driver (24) arranged on a conveyor belt (18) and fed in arrow direction (14) directly to an office machine. As a result of the arrangement of the conveyor belt (18) on the removal side (28) of the magazine (10), the separation and feeding take place in one step by means of a single conveying element. <IMAGE>
