Abstract (en)
[origin: EP0303107A2] The antiglare means for a workplace (2), illuminated by a window (3), in a closed room (1) is provided by a slatted blind (4) comprising mirror-coated slats (5) having an upward concave curvature and which rise towards the room (1). A retroreflecting foil (6) is bonded to each slat bottom in order also to block out, in the case of relatively large distances between the slats, light rays from the ground and those which have been reflected from the slat below and to give a bright, optically pleasing impression from the workplace (2). <IMAGE>
