Abstract (en)

[origin: EP0303526A2] The present invention relates to a part (100) for connecting two transversal profiled elements, such as a cross-piece and an upright of a framing structure. The connection part (100) according to the present invention comprises a seal (150), made of a synthetic elastomer material, integrated by overmoulding over the base body (110) of the connection part (100) in order to project over at least one portion of the outer surface of the base body (110). <IMAGE>
