Abstract (en)

[origin: EP0303820A1] The door leaf (1), in particular of an overhead sectional door, comprises a row of successively arranged, interlinked lamellae (4, 4'). For the purpose of a freer design of the overall door leaf structure and above all to make possible for transparent door leaf zones to be arranged in a simple manner, the door leaf is designed in such a manner that at least one single- or double-shell lamella (4) consists of transparent shell material and is inserted into the row of the other lamellae (4') which consist of non-transparent shell material. <IMAGE>
