Abstract (en)

[origin: EP0304300A2] There are disclosed a radiation image storage panel having a stimuable layer and a protective layer on a support, which comprises a layer having a lower refractive index than the protective layer is provided between the stimuable phosphor layer and the protective layer; and a process for preparing a radiation image storage panel composed of a support, a stimuable phosphor layer and a protective layer, and a protective layer supporting member is so provided between layers of the support and the protective layer as to surround and seal edges of the stimuable phosphor layer, which comprises the steps of providing at least one notch to the protective layer supporting member which functions as a vent hole, heating and drying the radiation image storage panel, and then fusing and sealing the notch or notches.
