Abstract (en)
[origin: EP0304411A2] In a file folder (1) which consists of a back (2) and a cover (3), which are connected to one another by a folded back strip (4), a tab (10) is provided between the back (2) and the cover (3) in the region of the fold (5), which tab is connected to the file folder (1). Tongues (13, 14), extending in the region of the fold (5) essentially parallel to the fold (5), are punched free out of the back (2). Said tongues (13, 14) are inserted through holes (16), provided in the tab (10), for filing written documents (15), and are then guided downwards with their free end through further holes (17) provided in the tab (10) with spacing from said holes (16). In order to simplify the threading of the tongues (13, 14) into the holes (16) in the tab (10), the holes (16) are open via connections (16') to the free end of the tab (10). <IMAGE>
