Abstract (en)

[origin: EP0304761A2] The invention relates to an installation for using the locks of hotel-room doors, the lockers of swimming baths or similar equipment, with a central dispensing station located in the region of an entry point of the hotel, swimming bath or the like and intended for locking elements (keys), each fitting a specific lock of the various doors, lockers or the like, and with a locking-element return device which is located in the region of an exit point and which interrogates the locking element and evaluates it, for example in respect of a charge for use, and which is connected by information line to the dispensing station, and proposes, in order to achieve optimum handling, that the locking element should bear an additional code (for example, bar code) for the purpose of tracking its route during use. <IMAGE>
