Abstract (en)
[origin: EP0305624A1] The modular set, for example for delineating work sites, for separating traffic lanes or for traffic islands, comprises principal elements (1) and joining elements (2). The principal elements comprise at each of their ends (16, 16') projecting attachment elements (3, 3') intended to receive, by sliding, recessed parts (4, 4') at the ends of the joining elements. The locking together of the modular set may be supplemented by pins (6) having twin stems (7, 7') which are inserted into holes (11, 11') in the attachment elements (3, 3'), as well as with the aid of rods (8) which are arranged longitudinally in a longitudinal groove (15) in the principal elements. The principal elements and the joining elements are hollow and may accommodate a ballasting weight. <IMAGE>
