Abstract (en)  
[origin: US5058353A] A multifunctional frame element is proposed, which is usable as a picture frame and also in many other different ways as a frame. The frame element has a clip fastening for pictures, plates, object carriers and the like which is not visible from the outside, so that art objects and the like can be attractively presented. Coins can be presented in such a way that an observer can easily see both sides of the coin.
