Abstract (en)

[origin: EP0306028A2] One-part or multi-part gate or door leaf with a bar lock, which has an upwardly and/or downwardly closing bolt and the locking bars of which are seated in a U-profile open forwards on the end face, as a door-leaf cover strip, so that assembly and, in particular, possible maintenance and fault elimination can be carried out in a simple way; in an especially preferred version, the locking bar or the two locking bars, after being transferred into the opening position, are held in this by means of a catch device, and the catch device triggers the transfer of the previously spring-loaded locking bars into the closing position only when the catch device senses the closing position of the door leaf or door-leaf wing.
