Abstract (en)

[origin: EP0306052A2] A method for manufacturing a brush, particularly a mascara brush, is described wherein bristles (16) are introduced between two elongate parts (12) of the attachment element (10) and the attachment element (10) is subsequently twisted so that the bristles (16) project radially from the attachment element (10) and extend in helical lines around the attachment element (10). Prior to twisting of the attachment element (10), the bristles (16) are fixed off-centre between the two elongate parts (12) of the attachment element (10) so that the bristles (16) project radially from the attachment element (10) with a partial length (a; a1, a2) further than with their remaining second partial length (b, b1, b2). <IMAGE>
