Abstract (en)
In a master cylinder, especially for a vehicle braking system, a cap (12) received on the body (1) for providing a passage which communicates a reservoir located forwardly of a mounting flange (5) with ports (11,15) behind the flange has a plurality of barbed locking fingers (20) which engage with a snap action in respective holes (22) provided in the flange to secure the cap (12) in position.
