Abstract (en)
[origin: EP0306600A2] The stackable package has boxes consisting of a bottom, side walls and end walls. The end walls project over the side walls. Moulded onto the end walls are outside tabs which grip around the side walls and form projecting guide angles with the assigned end wall. The side walls have inside tabs which are attached to the end walls and form resting edges for a box which can be inserted between the guide angles. At least two boxes are arranged adjacently. They are bonded at the projecting guide angles to form a composite box. The end walls and/or the side walls are inclined to the vertical at a distance-forming opening angle. In this case, a guide angle receiving gap is formed in each case between the bottoms of two adjacent boxes. A distancing element, connecting the boxes, is inserted in the guide angle receiving gap. <IMAGE>
