Abstract (en)

[origin: EP0306705A2] In a support structure for producing a catalytic reactor for purifying exhaust gas, consisting of a matrix of one or more metal strips which are wound or folded into a plurality of superimposed layers, it is proposed that solder material be provided, at least in the region of the outer most layer and the housing jacket, for soldering the housing jacket and the matrix, a wire mesh being inserted to hold the solder material between the outermost layer and the housing jacket. <IMAGE>
