Abstract (en)
[origin: EP0306734A1] A building block support (1) with building blocks (4), in particular teaching building blocks which are of cuboid construction and can be plugged onto the building block support with positive fit and with their side surfaces (5a) adjacent to one another, wherein each building block is provided on at least two side surfaces (5a) with electrical contacts which are connected to one another and the contacts of adjacent building blocks touch one another. By forming adjacent rows of building blocks on the building block support, an electric circuit can be set up, by means of which the system not only serves the purpose of providing creative structures, but functions in concrete terms as a teaching aid in order to convey in a light-hearted manner the function of electricity and the setup of an electric circuit. <IMAGE>
