Abstract (en)  
[origin: EP0306740A2] 2.1 In partially or fully automatically operating goods stores, it is a requirement that packaging and packaging aids take up only a small part of the storage capacity. Plastic bags, which serve as packaging aids and can be filled with air or a gas, fulfil this requirement. 2.2 In the packaging method, the plastic bag (3) is filled with air or gas (8) from the outside via an air or gas feed device and is closed. After the filling operation, the plastic bag (3) is present as a shock-absorbing packing and compensation element, extending in the free space of the packaging container (1), between items (2) of a unit load and the packaging wall of the packaging container (1). 2.3 The packaging and the packaging method are suitable for the packaging of items of a unit load, in particular small items. <IMAGE>
