Abstract (en)

[origin: EP0307594A2] The floor covering is composed of reusable parts (6), in particular in the form of tiles, slabs or webs, which are in anti-slip, but detachable effective connection to the upper side of the covered floor (1). The resistance to slipping is combined with easy removability of the floor covering parts (6), in that essentially rigid elevations (2) in the connection surface of the one side engage at least partially in corresponding depressions in the other side (8, 9). <IMAGE>
