Abstract (en)

[origin: EP0307768A1] The tool (10) for blowing threads into guiding tubes (19) comprises a blowing head (14) which is arranged in such a way that its blowing direction can be adjusted relative to an air-guiding tube (11) of the tool (10) by means of an adjustment device, so that an operator can move the blowing head into a favourable application direction and also actuate a compressed-air valve with one hand.
