Abstract (en)

[origin: EP0308307A1] The apparatus comprises means suitable for producing an electrical connection between at least one jumper wire (11a, 11b) having a conductive core surrounded by an insulating sheath and a pin by means of a conductive gripper (12, 29) having at least one cutting slit (14, 30) suitable for cutting through the sheath of the wire (11a, 11b) after the latter is forced into the slit (14) while establishing contact with the conductive core of the wire, means for providing the electrical connection between the gripper and the pin and means (16, 17) for causing the progressive engagement of the gripper onto the wire. <IMAGE>
