Abstract (en)
[origin: EP0308643A2] The rolling mill stands or groups of stands are arranged on a platform 1 which has running rollers 4 and, using these, can be moved into and out of a position in the rolling line of a mill train on tracks which run transversely to the rolling line. After being moved out of the rolling line, the stands together with the platform 1 can be transported in or away on rails which run transversely to the abovementioned rails. The running rollers 4 are mounted in supports 3 and are connected to the platform 1 in a manner which allows rotation about vertical axes. By rotating them about the vertical axes, they can be moved into and fixed in any desired rolling position, corresponding to the direction of the respective rails.
