Abstract (en)
[origin: EP0309370A1] A caisson-type housing (1) for a roller blind is composed, essentially, of two panels (2, 3) having a section of square shape, one (2) of which forms the front face and the top (4) of the said caisson-type housing (1), and the other (3) of which forms the rear face (5) and the bottom, the latter having an opening for the passage of the apron part of the roller blind. In order to facilitate dismantling and assembly of this caisson-type housing (1) and to limit the space required for carrying out these operations, the top (4) comprises, at the level of its free end (6), a return (7) parallel to the front face and provided with wedge-shaped fitting means (8) interacting with the free end (9) of the rear face (5). <IMAGE>
