Abstract (en)

[origin: EP0309384A1] It is intended to simplify the assembly of the movable contact parts (11) and of the trip devices by means of a modified structure of the case. The isolating walls (6, 7, 8) provided for forming the parallel chambers (2, 3, 4, 5) of the insulating case (1) are designed as isolating wall components (6b, 7b, 8b) at least on a part of their length and height. The trip devices (17, 20) are mounted on the isolating wall components before the latter are inserted in the insulating case (1). Low-voltage switching device of compact construction (MCCB). <IMAGE>
