Abstract (en)

[origin: EP0309412A2] The invention relates to a massage device (3) consisting of several plates (18) connected via webs or film hinges (21). On one of the plates (18) there is an electric motor (23) with an unbalanced mass. The vibrations generated by the electric motor (23) are transmitted, at the face of the bearing (27) accommodating the motor (23), to the rectangle (18). In order to increase the vibrations, two identical vibration elements (17) can be connected to one another. <IMAGE>
