Abstract (en)
[origin: EP0309438A1] An automatic hand gun (1) has a breech (2) guided displaceably in the longitudinal direction and with an impact base (14), a hammer (3) cockable by the returning breech (2), a breech-controlled continuous firing lever (6) catching the hammer (3) during the breech advance, and an ejector (15) movable relative to the breech (2) and ejecting the cartridge cases (16) during the breech return. <??>To achieve a space-saving construction of low outlay, the continuous firing lever (6) forms a control arm (11) which projects on the barrel side and engages into a control groove (12) of the breech (2) opening into the impact base (16) and which serves with its free end (15) as an ejector. <IMAGE>
