Abstract (en)  
[origin: EP0309440A2] Heating plant with a feed pump and with a heating boiler, to which a forward run pipe (2) as well as a return run pipe (3) for the heating medium are connected, the forward run pipe (2) being conducted to at least one forward run distributor pipe (21) and the return run pipe (3) being connected to a return run collector pipe (29) and there being arranged between the forward run distributor pipe (21) and the return run collector pipe (29), and connected to these, individual heating circuits with radiators (26a), floor heating pipes (26b) and the like, and shut-off valves or control valves assigned to these. At the same time, there are arranged in the forward run pipe (2) and/or in the return run pipe (3) two three-way valves (4, 5), to the third connections of which a flow measuring device (6) can be connected. <IMAGE>
