Abstract (en)
[origin: EP0309834A1] The hearing aid casing comprises at least two casing shells (2,3) and a battery compartment (8) which can be brought into different pivoting positions. To simplify the construction of the hearing aid (1), all holders of the battery compartment (8) - hinge (10) and locking means (11,12) for generating the various pivoting positions - are located on one casing shell (2). This facilitates the maintenance of tolerances in the production of the device. The battery compartment (8) is also placed firmly on one casing shell (2) and cannot become detached or loose in the further assembly of the device (1). <IMAGE>
