Abstract (en)
[origin: EP0309880A2] The hand tool has alternative heads, i.e., a ring spanner, a ratchet or open jaw spanner. The head can pivot or be fixed in various angled positions and its lower end is circular with a toothed edge (4). A slide (6) on a short bar (7) at an inclined plane with a toothed upper edge engages in the edge (4) of the head. When pushed to one end of the bar (7) the slide (6) engages with edge (4) and disengages when pushed to the other end. A ball catch (8) locks the slide (6) in position.
