Abstract (en)

[origin: EP0309968A2] A process and apparatus for separating selected C4 olefinic products from combinations thereof with lower boiling point compounds comprises partially condensing (in 15) a stream containing said products and compounds, atmospherically separating said partially condensed stream to yield gas and liquid streams, stripping said liquid stream to yield stripper overhead gas (8) and stripper bottoms liquids (9), and recovering said C4 olefinic and paraffinic products from said stripper bottoms liquid, all at selected temperatures and pressures adapted to produce a high recovered percentage of said desired C4 olefinic and paraffinic product.
