Abstract (en)

[origin: EP0310469A1] The device comprises inside a casing (11), a stationary contact (12) and a moving contact (13) which is carried by a displaceable arm (14), with elastic return on closing; a release (19) able to act on the contact-carrying arm (14) in the opening direction via a lock (25) in response to a short-circuit; an arc-cutting screen (27) driven by the release (19) in response to a short-circuit; a manual control member (32) connected to the contact-carrying arm (14). The screen (27) is operated following a manually controlled opening by means of a drive member (39) governed by the manual control member (32). <IMAGE>
