Abstract (en)

[origin: EP0310525A1] This method consists in: - bringing the flexible band (2) to the perforation (4a, 4b) on one side of the blank (4), - and passing the band (2) through the perforation by suction from the other side of the blank, the suction being maintained for the full length of the path travelled by the flexible band. The device comprises a work table (3) for taking the blank of board (4), means (1) situated beneath the blank of board (4) at the position of the perforation(s), and at least one suction system (45) arranged over the work table, at the position of each perforation (4a, 4b) in order by suction to draw the flexible band (2) through this perforation. <IMAGE>
