Abstract (en)

[origin: EP0311073A2] An exercise device for moving the joints of the body with the aid of bearing or support elements 15, which are driven by motors 13 via interposed connecting gears 3, 5, 7, 9, 12 and can be swivelled and/or raised and lowered. The bearing elements 15 are in this case arranged longitudinally displaceably, between movement limit stops, on support frames 2 which can be swivelled and/or raised and lowered.
